

NeuralData

The AI-Powered Data Intelligence Agent

Hackathon 2026 Pitch Deck

The Data Chaos Problem

Enterprise data is broken.

- **Fragmented:** Spread across Postgres, Snowflake, MongoDB, and S3.
- **Undocumented:** No one knows what `customer_ltv_v2_final` means.
- **Unsecure:** Sensitive PII (SSNs, emails) is scattered unknowingly.
- **The Result:** Engineers spend 40% of their time finding and verifying data instead of building.

Our Solution: NeuralData

A zero-setup **Data Intelligence Engine** that automatically connects to your silos, profiles schemas, and creates a unified Knowledge Layer.

1. **Connect:** Securely read schemas via automated pipelines.
2. **Profile:** ML-driven PII Named Entity Recognition.
3. **Score:** Real-time SLA & Data Trust scoring.
4. **Chat:** Ask plain-language questions to the AI Assistant.

Live Demo

(Switch to Prototype)

Key moments to highlight:

- **Terminal Extraction:** Connecting a new source.
- **Trust Dashboard:** The interactive 3D cards & live charts.
- **AI Assistant:** Asking a question and seeing the "Thinking" aura & formatted response.
- **Governance:** Toggling "Auto-redact PII".

How We Built It (Tech Stack)

Frontend UI/UX:

- **React 18 + Vite:** Lightning fast performance.
- **Styling:** Custom "Deep Space & Neon" CSS, Glassmorphism.
- **Animations:** Framer Motion (page transitions, 3D tilts).
- **Charts & Icons:** Recharts, Lucide-React.

Architecture built to scale from Prototype to Production.

Business Impact

Why does this matter?

- **Slash Onboarding Time:** New analysts can just *ask* the AI where data lives instead of digging through docs.
- **Automated Compliance:** Find PII before it leaks into public BI dashboards.
- **Engineering Velocity:** Free up Data Engineers to build pipelines, not answer slack messages about column definitions.

What's Next? (V2)

We built the frontend intelligence layer this weekend. Next up:

1. **Automated Remediation:** NeuralData proposes SQL to fix broken schemas.
2. **GenAI Backend Integration:** Hooking the Assistant UI up to OpenAI/Claude APIs.
3. **Slack Agent:** Bring the Data Intelligence Agent directly into company channels.

Thank You! 

We are Team NeuralData.

Any questions?
